

# **BUILDING N-27 MIDLIFE RENOVATIONS**

Building N-27 is a 5-story building on the USCG base in Kodiak. The City of Kodiak is located on Kodiak Island, about 240 air-miles south of Anchorage, accessible only by plane or Alaska State Ferry.

This project entailed the complete remodel of the top 4 stories of the building. The electrical portion of the work consisted of complete power and data re-wiring and all new energy efficient lighting. Puffin Electric performed the complete data installation, including the testing.

Puffin Electric had previously rewired the base commissary, located on the lower floor of this building.
